Problems of international ecological-economic policy regulation of emissions

S.V. Oleneva

It is considered the problems of the analysis of the effectiveness of the coordination of the policy of the regulation of the harmful ejections between the national governments of the countries. It is examined the mechanism of the introduction of payments for the use of the surrounding media as the effective tool realization of ecological-economic policy. Conclusions are made according to the results of the analysis of ecological-economic policy at the international level taking into account positive externals between the countries, connected with the propagation of innovation technologies (decreasing the expenses of reduction harmful ejections) and negative externals.

Keywords: *ecological-economic policy, the regulation of harmful ejections, permission to the ejections of pollutants, externals, environment*
