

Industrial and social internet of things (IoT): problems of forming trust

E. Khodenkova

The article considers the issue of trusting actors in the Internet of Things (IoT) environment. Elements of this environment are introduced into various areas of the social reality of modern society. The Social Internet of Things (SIoT) transforms the perception of things: the subject and a person are aligned with the right to influence the situation. Basic terms considering such as things, devices, objects, resources, addressing, identity, and the relationship between them will provide an understanding of these definitions and a uniform use in the future.

Keywords: *SMART индустрия, Internet of things (IoT), SMART industry, social Internet of things (SIoT), Industry 4.0, thing and object on the Internet of things*
