Observation subject and object relations

D. Sklyarov

The concepts of «observer» and «observed» are defined within the accepted terms, hierarchical relationships of them are considered, analyzed and structured. The main problems of interaction between the subject and the object of observations and mutual influence minimization problems are considered. Different variants of interaction of the subject and the object of observation through the means of observation are discussed. The concept of «observation focus» is introduced and the difference between the observation of objective and subjective reality is analyzed.

Keywords: *observation, subject of observation, observer, tools of observation, objective reality, subjective reality*
