Global economic integration above-national and national interests: structure, subjects, realization mechanisms

K.A. Borisovskaya

It is carried out the research of categorical apparatus system of foreign national and supranational interests, their structure and subject composition. The conclusion is drawn on globalization transformation of national economic interests system: genesis is defined by the expressed transition from prioritization of national external economic interest in quantitative definiteness of supranational external economic interest. It is established that for supranational interest national external economic interests act as subjects of balance, and at the international level as institutes of balance of interests serves the international legislation (contracts, agreements, memorandums, acts, protocols, decisions, orders, recommendations, etc.), the international organizations, for example, the WTO and instruments of the negotiation process (rounds).

Keywords: *interests, external economic interests, national and supranational interests, priorities, subjects, balance of interests, institutes*
