## **Development problems of Russian economics infrastructure**

***T.V. Panasenкова, V.V. Filonich***

*The innovative component of economic development plays a special role in its development, since the introduction of innovations at any level contributes to the qualitative development of the economy, the possibility of achieving global goals, provided that resources are saved. Due to the special strategic importance, the introduction of innovations requires a comprehensive, carefully planned approach, as well as building a modern innovation infrastructure — a complex of economic systems that serve and ensure the implementation of innovation. It is obvious that the achievement of the objectives of innovative development is impossible in the absence of properly organized infrastructure.*

**Keywords:** *innovative infrastructure, innovative economy, innovation, infrastructure, development*
