## THE BALANCED INDICES SIGNIFICANCE IN THE ACTIVITY ASSESSMENT OF RAILWAY STRUCTURAL DIVISIONS (IN TERMS OF CARGO TRANSPORTATION)

***N.M. Magomedova, M.V. Khlebnikova***

*The article is devoted to the determination of basic indexes in railway structural division assessment. The characteristic features of railway structural divisions activity indexes have been presented in the article. The main goals of divisions assessment planning have been determined. The main conditions, such as well-time right decision making of up-to-date market relations have been taken into account. On the basis of presented goals realization the ways of railway transportation process improvement on local level and within the framework of definite railway structural divisions have been proposed. The model presented in the article will allow to improve the activity efficiency of structural divisions JSC "Russian Railways" which in turn could have a positive impact on transport economy in the fields of market relations.*

**Keywords:** *railway transport, structural division, cargo transportation process, indices, mathematical methods, modelling, market relations, assessment, internal branch market*
