**O. Kamalova, E. Sklyarova**

*The features of public health and monetary policy of the United Kingdom during its accession and exit from the European Union are investigated. Based on the comparative research method, the authors analyze the features of this process, as well as the consequences of Britain's monetary and international policy. It is concluded that the process of formation and split of the European Union depends on the use of the national and international monetary system, medicines and medical supplies, as well as the desire of the United Kingdom to coordinate government spending, while maintaining the pound sterling as its national currency.*
