Infrastructural development of North Ossetia-Alania in modern conditions

M.S. Dzhagaeva, D. Pilieva

It is shown that ensuring a high level of infrastructural development is one of the main problems at both the state and regional levels. It is proved that the development of regional infrastructure makes it possible to regulate inter-regional migration, which prevents overpopulation of some regions and under-population of others, and increases the investment attractiveness of territories located far from the financial centers of the country.

Keywords: *infrastructure development, medical sector, educational institutions, infrastructure provision*
