

Identity of the cyborg: reflection on the problem

A.V. Zezyulko

It is considered the issue of human boundaries in the process of cyborgization, put on the agenda by the development of science and technology. It is given a brief overview of the problem of cyborgs discussed in the modern literature, highlighting such issues as human disability, technical failures, the possibility of dictating half-machines over people. Then it is analyzed the limits of the human from the point of view of the nature and nature of man. Cyborg, the author believes, is the result of the transformation of human nature, while the socio-cultural essence can exist in other, non-human forms, the civilization of cyborgs is not absurd. Another question is that the transformation of human nature affects its essential features. It is also considered the issues of self-identity of cyborgs and their identification with naturally formed in the socio-cultural process of sexual, age and ethnic groups. The question is raised about the relationship between the concept of cyborgization and the concept of the soul in its idealistic interpretation.

Keywords: cyborg, cyborgization, human nature, human nature boundaries, implants, chips, disability, identity, self-identity, self-identification
