The evaluation of the small enterprise financial condition

P. Kondratiev, N. Tatarov

In the context of the global economic crisis and taking into account the main trends of socio-economic development that have developed in Russia in recent years, the relevance of financial analysis has significantly increased. Today, special attention is paid to it, because on the basis of the economic component of the organization's activities, its strategy is developed and decisions are made by potential investors and other business partners. At the same time, a system of coefficients is used to analyze the financial condition of the organization. The set of indicators is usually universal, but it can be simplified for small businesses. This article provides a recommended algorithm for analyzing financial and economic activities, which can be applied by any small business enterprise, regardless of its field of activity.

Keywords: *financial state, financial analysis, small business, enterprise*
