### **Active participation of German lands in international relations on the example of Bavaria and Saxony-Anhalt**

***M. Dasuev, S. Umarova, A. Gatsaeva***

*Theoretical and methodological foundations of relations between the center and the lands of Germany are considered. Information on the international treaties of the German federal authorities and their implementation on the territory of all lands has been systematized. It is considered the role of regions in the foreign policy of the state within the framework of existing approaches to the problem of building federal political entities, their practical implementation. The general features of the construction of federal states and the principles of their functioning were identified. Theoretical discussions on the content of center-region relations in federal states were analyzed.*

**Keywords:** *Germany, federalism, actors, state centrism*
