Development and implementation of evidence-based regional demographic policy

Z. Pashaeva, R. Kasumyan

Today, the regulation of demographic processes is closely connected with the regionalization of the domestic economy, in which regions with depopulation often coexist with administrative-territorial entities in which there is an expanded reproduction of the population. The issues of developing and implementing a competent, evidence-based demographic policy in such conditions are of particular relevance.

Keywords: *reproduction of labor resources, natural population movement, level and quality of life, demographic situation, demographic policy*
